

Following the technical and mechanical evaluation performed by the company [AXA](#), it has been declared that the **DETER BOLT** system can be fully considered as a theft deterrent of solar and photovoltaic panels.

It has been shown that the grip, guaranteed by the use of **DETER BOLT** system, offers more guarantees than the other systems currently on the market, reducing the risk of fraudulent removal of photovoltaic panels.

The company, or individual, who decides to install a photovoltaic system is exposed to risks that, after an implementation phase, are not adequately covered by traditional insurances devoted to machinery and electronic equipment.

To meet these new needs [AXA](#), remarkably performing in the context of technological risks, has developed the new insurance covering

"Sustainable energy - photovoltaics insurance policy."

With these assumptions, the [AXA](#) Company and [Cagnasso Ltd.](#) have sealed a partnership agreement whereby clients who will provide the **DETER BOLT** system to their own facilities will be able to enter into a contract of insurance for their own solar and photovoltaic, enjoying a cost reduction on the theft warranty insurance.

The quote will be provided by the

Motta Francesco's [AXA](#) Agency - Corso Unione Sovietica n. 115 Torino – Italy -

Tel. 011/3185270 Fax 011/3185224 E-mail: info@mottafrancesco.it –

and it is subject to a questionnaire receipt to be completed by the client.

[AXA](#) remains free to require the action of a Risk Specialist for technical inspection and / or to verify that this system has the technical and logistical requirements defined by the [Company \[AXA Italy\]\(#\)](#).
